Pratiksha Shivsharne

Data Analyst | Associate Data Engineer | Microsoft Fabric | SQL | Power BI
+91 8237642318 · pshivsharne@gmail.com · LinkedIn · Portfolio

Data Analytics professional with hands-on experience in SQL, Power BI, and Python, currently working as a Data Analyst at AiVONIC Technology Pvt. Ltd. (Associate Data Engineer on the MediDeva project), building Medallion-architecture pipelines in Microsoft Fabric for a healthcare analytics platform. Previously a Data Analyst Intern at Vitalsym Healthcare, working with 10,000+ patient records. Awarded Best Project 2026 at MIT-ADT University for a healthcare ML system, and built NeuroMind AI, a Generative AI RAG chatbot deployed on AWS EC2. AWS Cloud Foundations certified.

TECHNICAL SKILLS

Python | Pandas | NumPy | Scikit_Learn | SQL | PostgreSQL | MySQL | SQLite | Microsoft Fabric | Medallion Architecture | Data Pipelines | Fabric Notebooks | Data Reconciliation | Data Validation | Power BI | Excel | Tableau | Data Cleaning | EDA | Feature Engineering | Statistical Analysis | AWS Cloud (EC2, S3, RDS) | GitLab | Git/GitHub | Generative AI | RAG | Jira | LangChain | Prompt Engineering | Docker | FastAPI | Streamlit

EXPERIENCE

Data Analyst | Associate Data Engineer, MediDeva.com Aug 2026 - Present
AiVONIC Technology Pvt. Ltd. · Visakhapatnam, India

- Building an end-to-end data pipeline for MediDeva.com using Bronze-Silver-Gold (Medallion) architecture in Microsoft Fabric, with Supabase PostgreSQL as the source database.
- Developed data ingestion and transformation workflows using Fabric pipelines and notebooks to prepare analytics-ready healthcare data.
- Designed the Gold layer with 6 dimension tables, 14 fact tables, and 5 reporting aggregate tables for downstream BI use.
- Implemented reconciliation and validation checks to ensure data quality and consistency across layers.
- Used Jira for project management - tracking tasks, user stories, and progress on pipeline and dashboard deliverables.
- Currently developing the Power BI semantic model, KPIs, and two dashboards: an Executive Dashboard (KPI monitoring, trends, comparisons) and an Operational Dashboard (status analysis, detailed reporting).

Data Analyst Intern | Healthcare Analytics Mar 2026 - May 2026
Vitalsym Healthcare Pvt. Ltd. · Pune, India

- Performed exploratory data analysis on patient health datasets using Python (Pandas, NumPy) to identify clinical patterns and risk indicators across 10,000+ records.
- Cleaned and pre-processed patient data - handled missing values, outliers, and class imbalance - raising the dataset's usable-record rate by 33% ahead of modeling.
- Built and delivered 10+ Power BI dashboards translating model performance, risk distributions, and clinical insights into stakeholder-ready reports for clinical and management teams.
- Partnered with clinical and management teams to gather requirements and align analytics deliverables with healthcare business objectives.

PROJECTS

Diabetic Detection | Predictive Classification System 2025 - 2026
Python · Scikit-Learn · Pandas · EDA

- Built a multi-model ML classification system on 500+ patient diagnostic records to predict diabetes risk, prioritizing recall to reduce missed positive cases.
- Improved model input quality by encoding categorical variables and resolving class imbalance via feature engineering, lifting downstream F1-score by 12% after cross-validation.
- Trained and benchmarked multiple Scikit-learn classifiers, using cross-validation to select the best-performing model.
- Identified key clinical risk factors through EDA and statistical analysis; awarded Best Project Award (2026), MIT-ADT University.

NeuroMind AI | RAG Chatbot for PDF Q&A 2026
LangChain · FAISS/ChromaDB · Llama 3.3 70B · Docker · AWS EC2

- Built and deployed a Retrieval-Augmented Generation (RAG) chatbot that lets users upload any PDF and get accurate, context-grounded answers to natural-language questions.
- Engineered the pipeline end-to-end - PDF text extraction, chunking (LangChain), HuggingFace embeddings, and semantic retrieval via FAISS/ChromaDB - feeding retrieved context to a Groq-hosted Llama 3.3 70B model to minimize hallucination.
- Containerized the app with Docker and deployed it live on an AWS EC2 instance, serving a Streamlit frontend backed by a FastAPI service.

EDUCATION

B.Tech - Information Technology (Data Analytics) | CGPA: 7.95 June 2022 - June 2026
MIT-ADT University · Pune, India

CERTIFICATIONS

- AWS Academy Graduate - Cloud Foundations (2025) - core AWS services (EC2, S3, RDS, IAM, VPC) for scalable data infrastructure.
